	1
Learning Objectives	
Define rational polypharmacy as it pertains to the patient in pain	
 Recognize the various pharmacological classes used in rational polypharmacy of migraine, neuropathic pain, and musculoskeletal pain conditions 	
 Distinguish between rational and irrational polypharmacy in managing pain 	
Pain Week	
	•
How does rational polypharmacy apply to my	
practice?	
 Synergistic combinations decreasing the amount of opioid needed for pain control 	
Const.	
 Using nonopioids as first line therapy can minimize or even prevent the need for opioid medications on a chronic basis 	
for opioid medications on a cirronic basis	
Shortages and regulatory constraints on the manufacture of opioids have lead	
to shortages and the inability of pharmacies to stock opioids and other medications used in pain management	
Painweek.	
	1
Definitions	
■ Polypharmacy:	
The use of two or more drugs together, usually to treat a single condition or disease	
or disease • Synergy:	
The cooperative action of two or more stimuli or drugs	
 Rational: Proceeding or derived from reason or based in reason 	
■ Irrational:	
Not endowed with the faculty of reason	

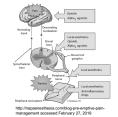

Goals of Rational Polypharmacy

- Minimize adverse effects
- -Lower doses of individual medications
- -Opioid sparing effects
- Increase adherence to the prescribed regimen
- Using synergistic combinations of medications to achieve improved outcomes compared to the individual medications
- Increase efficacy by utilizing long acting and short acting preparations

Painweek.

Hitting the Target(s)

- Stimulation of nociceptors causes signal transduction to the dorsal horn - Transduction
- The spinothalamic tract transmits the $\dot{\text{signals}}$ to the brain where pain is first experienced
- -Transmission and perception
- Descending pathways from the brain attempt to block the signal from the periphery
- -Modulation

Painweek.

Medications Used in Pain Management

- Acetaminophen

- ■5HT_{3-1B/D} antagonists (Triptans)
 ■Calcitonin gene-related peptide antagonists
- Antidepressants
- Anticonvulsants
- Local anesthetics
- Skeletal muscle relaxants
- Opioids

Acetaminophen

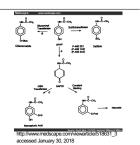

- Mechanism of action is still not entirely known
 - -Thought to be a partial COX inhibitor
- March 2014 FDA mandates all prescription drug combination products containing acetaminophen cap the dose at 325 mg
- Maximum daily dose limits vary based on comorbidities and who you ask
 FDA vs Johnson and Johnson

http://www.fda.gov/drugs/drugs/afety/informationby/drugclass/ucm165107.htm accessed January 30, 2018 https://www.tylenol.com/safety-dosing/usage/dosage-for-adults accessed January 30, 2018

Painweek.

Acetaminophen (cont'd)

- Largest concern is unintentional overdoses
- Metabolism of acetaminophen by the liver is a saturable process
- Over the counter products and cumulative acetaminophen dosing

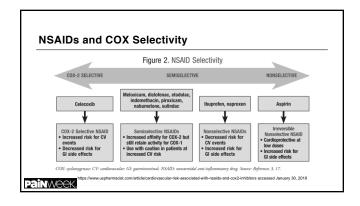

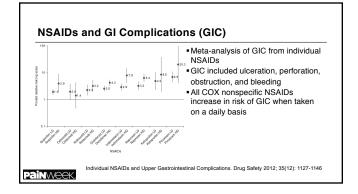

Painweek.

Nonsteroidal Anti-Inflammatory Agents

- ■COX 1 more specific to the GI tract and renal homeostasis
- ■COX 2 more specific to inflammation and platelet aggregation
- Certain comorbidities limit the dosing on most NSAIDs
- -Patients on anticoagulants
- -Patients with renal dysfunction
- -Pregnancy

<u>Pain</u>week.

Nonsteroidal Anti-Inflammatory Drugs

- Topical vs systemic NSAIDs
- -Patch, cream, lotion, etc
- •Range in application frequency from twice to four times daily -Topical can provide NSAID relief at the site of inflammation without the systemic side effects
- -Cost can be a limiting factor
- -Still carry a black box warning on the labeling for cardiovascular complications

5HT_{3-1B/D} Antagonists (Triptans)

- Serotonin receptor antagonists leading to
 - -Extra-cerebral vasoconstriction (5-HT_{1B})
- –Decreased inflammatory neuropeptide release (5- $\mathrm{HT_{1D}}$)
- Indicated for migraine treatment
- -Abortive therapy, not prophylactic
- Dosing in general involves administration of a second dose in 1 to 2 hours if the first dose was unsuccessful in aborting the migraine

Painweek.

Tri	ptans	(cont'd)				
Drug	Almotriptan	Eletriptan	Frovetripten	Naratriptan	Rizatriptan	Sumatriotan'	Zolmitriptan
Brand Name (Manufacturer)	Axert (Janssen)	Relpax (Pfizer)	Frova (Endo)	Amerge (USK)	Maxalt, Maxalt MLT (Merck)	Amitrex (OSK) Onzetra Xsail (Avanir) Sumavel DosePro (Endo) Zershrace Sum Touch (Promius)	Zomig, Zomig ZMT (Impax)
Generic Available	Yes	No	Yes	Yes	Yes	Yes - for Insitrer products only	Yes - for oral tabs and ODTs only
Route of Adminstration	Oral	Oral	Oral	Oral	Oral	Oral; Nasal; SC	Oral; Nasal
Formulations	6.25, 12.5 mg tabs	20,40 mg tabs	2.5 mg tabs	1, 2.5 mg tabs	5,10 mg tabs and 5,10 mg COTs	Invitive and generics — Cold 25.5 (b) flowing table SC 4.6 mg/0.5 mL auxiv-injector pen and reffi cartridge, viale? Nasal-5. 20 mg/0.1 mL nasal spray Chareir Xasia 11 mg maral spowder caps Sumanel Doseffvc 6 mg/0.5 mL SC needle-free deferver yestem Zembrace SymTouch: 3 mg/0.5 mL SC aution (SC 5 mg/0.5 mL SC 5 mg/0.5 mL	Oral: 2.5, 5 mg tabs and 2.5, 5 mg COTs Nasal: 2.5, 5 mg/0.1 ml. nasal tpray

Elimination Half-life	3-4 hrs	~4 hrs	~25 hrs	~6 hrs	2-3 hrs	~2 hrs	2-3 hrs
PaiN/	<i>е</i> ек.	http://www.h	eadache.mo	bi/uploads/1/1/7	7/5/11757140/trip	tans.pdf accessed 2.2	8.2019

Triptans (cont'd)

- Patients that are NOT candidates for triptan agents
- -Ischemic heart disease
- -Uncontrolled hypertension
- -Peripheral vascular disease
- -History of cerebrovascular syndromes (stroke or transient ischemic attack)
- Multiple formulations exist for
- -Sumatriptan (nasal, SQ, oral)
- -Zolmatriptan (nasal and oral)

Calcitonin	Gene-Related	Peptide	(CGRP)	Antagonists

- Monoclonal antibodies that bind to CGRP
 - -Preventing intracranial artery vasodilatation
- -Prevention of dural mast cell degranulation
- Indicated for the prevention of migraine
 - Not indicated for the management of acute migraine symptoms
- Administration of the currently approved agents monthly subcutaneous injection

AnnRevPharmacolTox.55.533-52 2015

CGRP Antagonists Currently Available

- Erenumab-aooe [Aimovig®]
 - -Subcutaneous injection 70 mg once monthly
 - -May increase to 70 mg twice a month in some patients
- Fremanezumab-vfrm [Ajovy®]
- $-\mbox{Subcutaneous}$ injection 225 mg once monthly or 675 mg every three months
- Galcanezumab-gnlm [Emgality®]
- -Subcutaneous injection 240 mg once then 120 mg monthly

Painweek.

Lexicomp accessed 3.1.2019

CGRP Antagonists (cont'd)

- Questions that remain unanswered regarding their long term safety include
- -Hypertension
- -Nitric oxide synthase
- -Platelet aggregation
- -Negative impact on microvasculature
 - •Heart failure
 - •Diabetes

	7
Tricyclic Antidepressants (TCA)	
Mechanism of action is through inhibition of norepinephrine and serotonin reuptake and inhibition of sodium channel action potentials	
 The antidepressant effects and the neuropathic pain analgesia are independent Higher dosing and longer treatment time needed for antidepressant effects 	
Caution should be exercised in patients -With cardiac arrhythmias	
–Over the age of 65	
Pain week.	
	_
	_
Serotonin Norepinephrine Reuptake Inhibitors (SNRI)	
Mechanism of action is through inhibition of norepinephrine and serotonin reuptake	
 Dosing is generally higher for treating neuropathic pain compared to treating depression 	
 Withdrawal syndromes can occur if patients are taken off SNRI therapy abruptly Anxiety, irritability, headache, paresthesia, nervousness 	
Caution should be exercised in patients with liver dysfunction, uncontrolled hypertension, or moderate cardiovascular disease	
Pain week.	
Antienilentics	

• The primary antiepileptics used in pain management work on calcium channels

—Gabapentin

Other antiepileptics have had mixed results regarding neuropathic pain

Valproic acid

-Pregabalin

-Phenytoin

Painweek.

■ Carbamazepine for trigeminal neuralgia

8

]
Local Anesthetics	_
Mechanism of action is through membrane stabilization of sodium channels preventing depolarization and signal transduction Acute uses for local anesthesia (procedures, etc) —Topical application Cream, ointment, patch, etc	
-Intradermal injections -Nerve blocks	
Patches are indicated for the management of postherpetic neuralgia	
Painweek.	
	1
Skeletal Muscle Relaxants	
Multiple medications are included in this general taxonomy	
-Certain agents approved for spasticity •Baclofen and tizanidine	
Others stand out for reasons other than their indication	
-Cyclobenzaprine and orphenadrine regarding their anticholinergic effects -Chlorzoxazone and potential for hepatotoxicity	
-Carisopradol and meprobamate and potential for abuse	
Painweek	
Opioids	
Opioids work on multiple receptors within the CNS Analgesia and adverse effects are derived from mostly mu receptors	
There is no ceiling dose for analgesia; however, as doses increase the	
incidence of adverse effects increases	
 CDC (2016) and VA/DoD (2017) guidelines outlining the use of opioids in chronic pain have been published 	

Opioids (cont'd)

- Agonists vs partial agonists vs antagonists
 - -Morphine, fentanyl, methadone, etc
 - $\\ Buprenorphine, nalbuphine, but or phanol$
 - -Naloxone and naltrexone
- Awareness of other nonpain combination products
 - $\\ Naltrexone-bupropion for weight loss$

Painweek.

Opioid Statistics

- Medication overdose deaths in 2016: 63,632
- -Opioids (illicit and prescription) were involved in 66.4% of those fatalities
- Patients on > 90 morphine milligram equivalents have decreased from 11.5 to 5 per 100 patients in the US

2 No. 201 And 100 And

25

Patients at Risk for Opioid Adverse Events

- Patients with sleep apnea and sleep disordered breathing
- Pregnancy
- Hepatic or renal dysfunction
- Age greater than 65
- Mental health or substance use disorders
- Nonfatal overdose history

Painweek.

Opioid Metabolism

- Metabolic pathways can become saturated leading to metabolism by other pathways
 - -Codeine
 - -Oxycodone
 - •2D6 → noroxycodone
 - •3A → oxymorphone

Dain

http://www.medscape.com/viewarticle/723131_2 accessed 3.6.2019

Immediate Release (IR) vs Extended Release (ER)	
Initial therapy should include the use of IR formulations ER preparations are appropriate for patients	
 That routinely use the IR preparation with relief of pain That are not experiencing adverse effects that decrease quality of life 	
That are on stable doses of IR preparations and have been for an appropriate time frame	-
 IR and ER preparation use should be re-evaluated for safety and efficacy periodically or per state guideline 	
Painweek	
	J
	1
Nonrational Polypharmacy	
 Utilizing two medications in the same family for the same condition —Ibuprofen and naproxen 	
-Morphine immediate release and oxycodone immediate release	
 Adding a medication that may be contraindicated based on the patients other comorbidities 	
-Methadone use in a patient with a history of QTc prolongation	
-Tramadol or use in a patient with underlying seizure history	
Painweek,	
Rationalizing Migraine Pain Management	
•Use of abortive medications at the beginning of a migraine	
NSAIDs, triptansOpioids and dopamine antagonists (severe)	
 Use of prophylactic therapy once patients meet criteria More than two migraines per month 	
 -Migraine lasts for more then 24 hours -Use of abortive therapy more than twice per week 	

		Beta blockers	Comorbid Condition	Medication	_	
	High efficacy	Tricyclic antidepressants Diverproex	Hypertension	Beta blockers		
rst line		Topiramate	Angine	Beta blockers		
	Low efficacy	Verapamil	Stress	Bete blockers		
		Methysergide	Depression	Tricyclic antidepressants, SSRts		
		Flunarizine MAOIs	Overweight	Topiramate, protriptyline		
econd line	High efficacy	CGRP inhibitors Botulinum toxin	Underweight	Tricyclic antidepressents (nortriptyline, protriptyline)		
		Cyproheptedine	Epilepsy	Valproic acid, topiramate		
	Unproven efficacy	Gabapentin	Mania	Velproic acid		
IAOIs = mono	emine oxidase inhibi	itors	SSRIs = selective serot	pnin reuptake inhibitors		

Rationalizing Neuropathic Pain

- Scheduled use of tricyclic or SNRI antidepressants at appropriate doses

 —Caution regarding the use of anticholinergic tricyclic agents
- Use of antiepileptics at appropriate doses
- -Opioids may be used in combination with the use of an antiepileptic
- -Topical local anesthetics such as patches and creams with the above

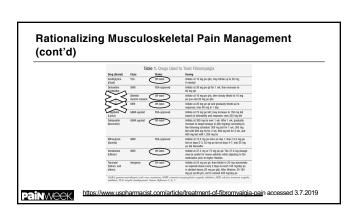

Painweek.

		Topical Agents	
NSAIDs and acetaminophen are unlikely	Lidocaine 5% patch	Apply to most peinful area of intect skin. Up to 3 patches may be applied in a single application and may remain in place for up to 12 boars in any 24-hour period	Pruntus, dysethesia, vesicular rash, ulcerations, ediema, erythema, depigmentation
o alleviate neuropathic pain	Capsaicie B'is patch	Apply its most perieful area of intext skin for 60 minutes, then remove, up to 4 patches may be applied in a single application. May repeat so hines their every 3 manths upon reform of pairs. Area should be pretreated with a topical averaged part of patch applications.	Enflrenz, pain, hyperlession (baselest), pruritus, nausea, soniting, papules, edenta, nacepharmyreptis
And an arrangement of the second second second		Tricyclic Antidepressants (TEAs)	
 Anticonvulsants, local anesthetics, and tricyclic antidepressants are mainstays in neuropathic pain management 	Sorappler	10-35 mg at bedfirme, increase does by 25 mg/day weekly it tolerated, sould insisterance does 75 mg/day as a single bedfirme does or 2 disided doses; resolmum 125 mg/day	Dry mouth, constigution, anhythmix, least likely TCA to cause orthestatic lryselensies; less likely TCA to cause cognitive impairment, sedution, and anticholinergic effects
	Designamine*	10-25 mg/day, increase every 3 days as necessary writi desired effect achieved, usual effective closic 50-150 mg/day, maximum close 150 mg/day	Dry mouth, constipution, anhythmia, cognitive impairment, orthostotic trypetension; tess likely TCA to cause sedistion and articholinengic effects
		Anticonvolvants	
Opioids may have a place but not first or	Sabapentin	Day 1: 300 mg, day 2: 300 mg helox dialy, day 3: 200 mg 3 times/day; dase may be titrated as needed for pain relief (range; 1,800-2,600 mg/day); daily dases >1,800 mg do not generally show grader benefit	Dischess, abeix, somedence, fulgue, perpheral edens, impaired cognitive function
second line	Pregabalin	150 mg/day in divided doses (15 mg talox daily or 50 mg 3 fames daily; may be increased to 300 mg/day, within 1 week based on biokasiblije/likinc, may consider 600 mg/day after 2-4 weeks it tolerated, lithalimum doser 600 mg/day	Distribus, abaia, samedence, impained cognitive function, peripheral edenia, headache
		Systemic Analysiscs	
Muscle relaxants are controversial in	Crycadone (opisid) Regular or immediate- rolesse formulation (dasage given for mogitime agranulation)	2.5-15 mg every 4 hours as needed. After 5-2 weeks, sanvest total daily disease to long-acting opcid analysis and continue short-acting agent as needed	Constigution, nauses, somnolimos, impaired cognitive function, falls
terms of efficacy	Tramadol Incredido-erissor Exmutation	50-103 mg every 4-6 hours, moximum dose, 400 mg/day sevanio; 25 mg once daily, increase 25-50 mg/day in divided dose every 3-7 days as foliastind, maximum 300 mg/day in collects over 35 vers of see	Constigution, nauses, dizziness, headache, sonsolesce, vaniding, praritus, insomnia, othesiasis, falls

	us	

- Pain management typically involves more than one modality in order to manage
- Safety must take into consideration patient specific factors that will change over time
- Certain combinations can put patients at risk for adverse effects but having a complete picture of a patients medications can help prevent this

See you at PAINWEEK
