

The *Other* Opioid Crisis: Heroin and Fentanyl

Kevin L. Zacharoff, MD, FACIP, FACPE, FAAP

1

Disclosures

- Nothing to Disclose

2

Learning Objectives

- Describe the opioid overdose crisis in the United States today
- Discuss common beliefs and inconsistencies about the role of prescription opioids in the opioid crisis
- Identify the intersection of illicit drug use and clinical pain practice in today's "opioid epidemic"
- Provide clinically relevant recommendations for navigating the current landscape without depriving pain care to patients in need

3

Is There More than one Opioid Crisis?

4

The Facts

5

The Facts: No Lack of Media Attention

6

The Facts

- People are dying...
- People are angry and reacting
- People are scared
- Overdoses from drugs (**ALL** drugs, legally prescribed or not) including opioids, hallucinogens, cocaine, etc.

~72,000 deaths nationwide in 2017

- ↑12% from 2016
- More than 42,000 (~66%) involved some type of opioid
- ****Some question accuracy regarding CDC overdose data and prescribed opioid analgesics****

PainWeek There is More Than One Opioid Crisis. To better tackle the epidemic, Kentucky needed to know which drugs were causing lethal overdoses. By Kathryn Casper. Published Jan. 17, 2018. <https://thehill.com/painweek/there-is-more-than-one-opioid-crisis/>. Accessed January 18, 2018.

7

The Facts

- Drug(s) Responsible May be Unknown
- Overdose is usually about **RESPIRATORY DEPRESSION**
- Sometimes causes are not reported
 - May depend on the state
 - Trends can be difficult to identify
- This may lead to a lack of focus

Identifying drugs in overdose deaths
in each state, 2016

STATE	CASES IN WHICH DRUG(S) WAS IDENTIFIED		
	ALL DEATHS	TOTAL	SHARE
Alabama	999	473	47.3%
Alaska	4,627	2,055	44.4%
Arizona	758	308	40.6%
Arkansas	313	145	46.3%
California	5,598	2,477	44.3%
Colorado	282	99	35.1%
Connecticut	128	57	44.5%
Delaware	482	225	46.7%
Florida	4,728	1,244	26.3%
Georgia	242	59	24.4%
Hawaii	2,098	481	22.9%
Idaho	53	19	35.8%
Illinois	99	21	21.2%
Indiana	4,854	959	19.8%
Iowa	321	82	25.5%
Kansas	942	172	18.3%
Kentucky	1,439	253	17.6%
Louisiana	2,372	289	12.2%
Maine	77	11	14.3%
Massachusetts	1,392	198	14.2%

There is More Than One Opioid Crisis. To better tackle the epidemic, Kentucky needed to know which drugs were causing lethal overdoses. By Kathryn Casper. Published Jan. 17, 2018. <https://thehill.com/painweek/there-is-more-than-one-opioid-crisis/>. Accessed January 18, 2018.

The Facts: Kentucky as an Example

The most common drugs found in Kentucky's overdose victims
Based on an analysis of 1,471 drug overdose deaths in 2016

Individual drugs		Two-drug combinations		Three-drug combinations	
DRUG	SHARE	DRUGS	SHARE	DRUGS	SHARE
Morphine	45.4%	Heroin, morphine	24.3%	Heroin, morphine, codeine	16.6%
Fentanyl	37.0%	Fentanyl, morphine	23.7%	Heroin, morphine, fentanyl	11.6%
Gabapentin	32.6%	Codeine, morphine	20.0%	Morphine, codeine, fentanyl	9.3%
Alprazolam	25.5%	Heroin, codeine	18.6%	Heroin, morphine, THC-COOH	7.9%
THC-COOH	24.9%	Gabapentin, morphine	14.2%	Heroin, codeine, fentanyl	7.6%
Heroin	24.7%	Morphine, THC-COOH	12.8%	Fentanyl, morphine, THC-COOH	7.3%
Codeine	20.7%	Alprazolam, morphine	12.6%	Alprazolam, heroin, morphine	7.3%
Ethanol	18.4%	Methamphetamine, amphetamine	12.0%	Gabapentin, heroin, morphine	7.1%
Oxycodone	17.2%	Heroin, fentanyl	11.7%	Gabapentin, fentanyl, morphine	6.8%
Methamphetamine	17.1%	Oxycodone, oxycodone	11.5%	Alprazolam, codeine, morphine	6.6%

In cases in which multiple drugs are detected, every individual drug -- as well as every two- and three-drug combination -- is counted separately.
There is More Than One Opioid Crisis. To better tackle the epidemic, Kentucky needed to know which drugs were causing lethal overdoses. By Kathryn Casper. Published Jan. 17, 2018. <https://thehill.com/painweek/there-is-more-than-one-opioid-crisis/>. Accessed January 18, 2018.

THE DENVER POST

The Facts

A crackdown on overprescribing isn't enough — drug treatment options remain a challenge.

According to policymakers, Colorado's initial efforts to restrict opioid prescriptions may have an unintended effect: pushing addicts to opioids such as heroin or fentanyl. The trend is spotlighting the limited treatment options for drug users who want help.

Colorado heroin-related overdose deaths
Heroin deaths have increased by more than 500 percent since 2006.

Year	Deaths

THE DENVER POST

The Facts

Doctors will soon get opioid prescription "report cards."

To educate doctors about the dangers of overprescribing opioids, Colorado is testing a relatively new idea that is showing early results — prescriber report cards.

The reports, also known as scorecards, will give clinicians a summary of their prescriber history and how they rank with their peers in the same specialty in terms of dosage, duration and type of drug.

Colorado opioid-related deaths
Rates per 100,000 for 2016

Category	Rate per 100,000
Male	11.3
Female	4.9
15 to 24 years	12.0
25 to 34 years	16.3
35 to 44 years	15.2
45 to 64 years	12.6
65+ years	4.2
White, non-Hispanic	9.6

Baltimore City's Response to the Opioid Epidemic

The Facts

The Baltimore City Health Department (BCHD) is dedicated to preventing overdose deaths in Baltimore City. Opioid overdose is a public health crisis. In 2017, Baltimore City saw 761 drug and alcohol-related intoxication deaths, 692 of which were opioid-related. This is more than double the number of people who died of homicide. Baltimore City now has the highest overdose fatality rate of any city in the United States.

Baltimore City Health Department

BCHD has a three-pronged strategy for combating the opioid crisis:

- Save lives with naloxone** — When administered to an individual experiencing an overdose, this injection medication can take them from near death to waking and taking a breath of fresh air. The first step in getting the opioid crisis to its acute response is saving lives today by getting naloxone into the hands of first responders and bystanders alike. [Learn about our naloxone programs, including the State's standing order, where to get naloxone, how to get trained, and more — here.](#)
- Increase access to on-demand, evidence-based treatment** — BCHD promotes evidence-based medication assisted treatment (MAT), along with social and behavioral services to treat the disease of opioid addiction. [For more information on where to receive treatment, treatment programs and partnerships, and more, click here.](#)
- Fight the stigma of addiction through education** — Addiction is a disease. Similar to heart disease, addiction is preventable and treatable. [For more information on fighting the stigma of addiction and educational materials about addiction, click here.](#)

Bill of Rights for People with Chronic Pain

Is the Current Climate Living up to Promises Made in the Past?

Does the chronic pain patient still have rights?

Is this a problem about chronic pain patients abusing prescription pain medications?

- The right to have your report of pain taken seriously and to be treated with dignity and respect by doctors, nurses, pharmacists and other healthcare professionals.
- The right to have your pain thoroughly assessed and promptly treated.
- The right to be informed by your doctor about what may be causing your pain, possible treatments, and the benefits, risks and costs of each.
- The right to participate actively in decisions about how to manage your pain.
- The right to have your pain re-assessed regularly and your treatment adjusted if your pain has not been eased.
- The right to be referred to a pain specialist or other healthcare provider if your pain persists.
- The right to get clear and prompt answers to your questions, take time to make decisions, and refuse a particular type of treatment if you choose.

17

THE DENVER POST

NEWS HEALTH

Chronic pain patients say they are hurt by Colorado's opioid prescription guidelines

Some Colorado doctors are refusing to prescribe opioids to chronic pain sufferers

Now, across Colorado and the rest of the nation, these policies intended to address opioid abuse have unexpectedly harmed patients who depend on the drugs to treat chronic conditions, pain specialists and patient advocates say. The policies are supposed to offer guidance — helpful advice to doctors to be cautious in prescribing more than a certain amount of opioids to any one patient.

Officials at the Colorado Department of Regulatory Agencies are looking at revising the guidelines. The Colorado Consortium for Prescription Drug Abuse Prevention, a group of medical and drug experts, is also working on ideas to protect pain patients while cracking down on opioid abuse.

The Facts

The Heroin Epidemic

Heroin use is part of a larger substance abuse problem.

Nearly all people who used heroin also used at least 1 other drug.

Most used at least 3 other drugs.

Heroin is a highly addictive opioid drug with a high risk of overdose and death for users.

People who are addicted to...
 ALCOHOL 2x, MARIJUANA 3x, COCAINE 15x, OPIUM PRESCRIPTIONS 40x...
 ...more likely to be addicted to heroin.

Heroin Addiction and Overdose Deaths are Climbing

CDC Centers for Disease Control and Prevention
CDC/NIH/Seizing the Moment, Protecting the People™

The Clinical Implications

CDC Vital Signs July 2015

- Recommendations that impact us:
 - Screen and identify high-risk individuals
 - Treat people with substance abuse disorders
 - Naloxone

Responding to the Heroin Epidemic

PREVENT People From Starting Heroin

Reduce prescription opioid painkiller abuse. Improve opioid painkiller prescribing practices and identify high-risk individuals early.

REDUCE Heroin Addiction

Ensure access to Medication-Assisted Treatment (MAT). Treat people addicted to heroin or prescription opioid painkillers with MAT which combines the use of medications (methadone, buprenorphine, or naltrexone) with counseling and behavioral therapies.

REVERSE Heroin Overdose

Expand the use of naloxone. Use naloxone, a life-saving drug that can reverse the effects of an opioid overdose when administered in time.

PainWeek ©2015 CDC/NIH/Seizing the Moment

31

The Facts – The “F” Word

Fentanyl

- Originally developed as an anesthetic
 - One of the safest opioids
 - High LD50/ED50 ratio
- More potent than morphine
 - 100 times more potent
- More potent than heroin
 - 20-50 times more potent
- NOT NEW

FENTANYL: Overdoses On The Rise

Fentanyl is a synthetic opioid approved for treating severe pain, such as advanced cancer pain. Illicitly manufactured fentanyl is the main driver of record increases in synthetic opioid deaths.

50-100x MORE POTENT THAN MORPHINE

196% INCREASE in total deaths from 2012 to 2015

73% INCREASE in total deaths from 2012 to 2015

264% INCREASE in total deaths from 2012 to 2015

ILLICITLY MANUFACTURED FENTANYL

Although prescription rates have fallen, overdose associated with fentanyl has increased from 100 to 1,000 cases per year in the United States.

HEROIN is the leading cause of synthetic opioid deaths.

PainWeek

32

Heroin and Fentanyl: A “Perfect” Pair The Facts

- The overwhelming majority of the time fentanyl is paired with heroin
- To get a better “high”
- “Better” economic profile
- Things may be changing...
 - Watch for methamphetamines

Fentanyl

The Facts

WORLD | ASIA | CHINA NEWS

The Chinese Connection Fueling America's Fentanyl Crisis

A vast network beginning in China feeds fentanyl, a deadly synthetic opioid, to the U.S., Mexico and Canada

By JEANNE WHALEN and BRIAN SPREGES
Updated June 23, 2016, 1:44 a.m. ET

Criminal Chemistry
It's the same molecule being synthesized often overseas; the key ingredient from China, which doesn't regulate its sale. Here's how the chemical building blocks to become a highly profitable street drug

The key ingredient is NPP, 25 grams of which can be bought from China for about \$87

NPP can be combined with about \$700 of other chemicals to produce fentanyl

The resulting 25 grams of fentanyl cost about \$100

That's equivalent to up to 800,000 pills on the black market

From THE WALL STREET JOURNAL

- Fentanyl can be manufactured anywhere
- Synthetic
- N-Phenethyl-4-piperidinone is NPP
- Intermediate precursor to fentanyl
- It is cheap
- It is not going anywhere

PainWeek

36

Terminology The Facts

- A very small amount of fentanyl is potentially fatal
- This applies to **licit or illicit** fentanyl
 - Illicitly manufactured fentanyl is likely no more dangerous than legally manufactured fentanyl
- Fentanyl label:
 - FENTANYL CITRATE SHOULD BE ADMINISTERED ONLY BY PERSONS SPECIFICALLY TRAINED IN THE USE OF INTRAVENOUS ANESTHETICS AND MANAGEMENT OF THE RESPIRATORY EFFECTS OF POTENT OPIOIDS
 - AN OPIOID ANTAGONIST, RESUSCITATIVE AND INTUBATION EQUIPMENT AND OXYGEN SHOULD BE READILY AVAILABLE
 - Fentanyl may cause muscle rigidity, particularly involving the muscles of respiration
 - DIMINISHED SENSITIVITY TO CO₂ STIMULATION MAY PERSIST LONGER THAN DEPRESSION OF RESPIRATORY RATE

PainWeek

37

A Fentanyl Crisis The Implications

Fatal fentanyl overdoses, by county

The Washington Post

Fentanyl linked to thousands of urban overdose deaths

In 24 of the nation's largest cities fatal fentanyl-related overdoses increased 600% from 2014-2016

Fatal fentanyl overdoses per 100,000

PainWeek

38

Increasing Fentanyl Overdoses The Facts

FIGURE. Percentage of opioid overdose deaths testing positive for fentanyl and fentanyl analogs, by state — 10 states, July-December 2016

41

The Facts

- Fentanyl in the wrong hands is deadly
- Potentially contributing significantly to overdose/fatal overdose risk
- Analogos not often tested for in routine toxicology testing
- Naloxone is a **bridge** to survival but not a final solution
 - Re-narcotization from fentanyl is common
 - Blunting of CO₂ response **will persist**
 - Diminished hypoxic drive may persist

 Weekly / Vol. 68 / No. 34 August 30, 2019

Changes in Opioid-Involved Overdose Deaths by Opioid Type and Presence of Benzodiazepines, Cocaine, and Methamphetamine — 25 States, July–December 2017 to January–June 2018

R. Man Giallino, PhD¹, Julie O'Donnell, PhD¹, Christopher L. Simpson, PhD², Philip S. Kelly, PhD²

**U.S. Department of Health and Human Services
Centers for Disease Control and Prevention**

3 Waves of the Rise in Opioid Overdose Deaths

Three major changes in opioid deaths from July–December 2017 to January–June 2018 were identified:

- Overall decreases in opioid overdose deaths
- Decreases in both prescription opioid deaths without co-involved illicit opioids and non-IMF¹ illicit synthetic opioids (i.e., fentanyl analogs and U-series² drugs) deaths
- Increase in IMF deaths, especially those with heroin, fentanyl analogs or non-opioid drugs
- At least one non-opioid drug (benzodiazepine, cocaine, or methamphetamine) was present in the majority of opioid deaths

1 IMF = Illicitly Manufactured Fentanyl
2 U-series drugs = AAN novel non-fentanyl-related synthetic opioids with no authorized medical uses

PainWeek

49

We didn't Start the Fire...Or did We?

- Significant controversy exists to the relationship between prescription opioids and the heroin/fentanyl epidemic
 - Tracking back to prescribers
 - The 1990s when opioid prescribing increased
 - Pain being designated as the "5th vital sign" in 2000
 - Pain Bill of Rights
 - Evolution of "pill mills"
 - Related to cost and availability
 - Heroin and fentanyl are cheaper and stronger

PainWeek

50

Who and What is Our Responsibility?

We Are Involved Like it or Not

51

Does the United States Own The Problem??

- We are not alone
- This *is* a global issue
- In 2015, approximately ¼ billion people abused/misused drugs
 - ~ 29.5 million (0.6% of global adult population) engaged in problematic use/suffered from substance use disorder
- 70% of the global burden of disease caused by drug use disorders attributable to opioid use

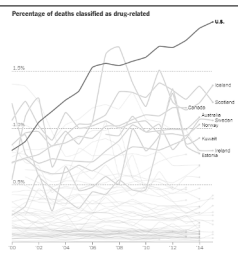

Painweek

52

However... The Facts

Drug-related deaths remain highest in the U.S.

53

Clinical Considerations and Implications

- The "New Math" for determining opioid risk/benefit analysis

Painweek

54

Final Thoughts

- We must consider the parallel "opioid" crises that exist today
 - Our role in these problems
- Heroin and fentanyl are not going anywhere
- Remember the "New Math"
- Naloxone is likely something to keep top of mind
- Avoidance of "risky" situations is critical
- Strongly consider and document appropriate candidates for fentanyl-based therapies
- DO NOT CO-PRESCRIBE OPIOIDS and BENZODIAZEPINES
- Everyone is looking at us as an integral part of solving the "other" opioid crisis
- Everyone is looking to us to be a part of the solution to both crises

55

Final Thoughts

But... Let's not make patients "pay" for the other crisis

56

"Cure sometimes, treat often, comfort always."
— Hippocrates
